

**CORRECTION TO “DETECTION OF CARBOXYLIC ACIDS AND
INHIBITION OF HIPPURIC ACID FORMATION IN RATS TREATED
WITH 3-BUTENE-1,2-DIOL, A MAJOR METABOLITE OF
1,3-BUTADIENE”**

In the above article [Sprague CL and Elfarra AA (2003) *Drug Metab Dispos* **31**:986–992], there was an error under *Results*.

On page 989, the first sentence in the second paragraph under *BDD Detection in Urine*, should have read: “Mice treated with 1420 and 2840 $\mu\text{mol kg}^{-1}$ BDD excreted similar amounts of BDD whether the data were expressed as $\mu\text{mol kg}^{-1}$ (Fig. 3) or as the percentage of dose recovered as total BDD (3.4 and 1.7%, respectively).” In the original sentence, the percentage of dose recovered in rats given 2840 $\mu\text{mol kg}^{-1}$ was incorrectly stated.

The online version of the article was corrected in departure from print. The authors regret this error and apologize for any inconvenience it may have caused.
