Simcyp workshops are an ideal way to enhance the continuous education of your staff. This is an excellent opportunity to develop skills in the prediction of pharmacokinetics, stay up-to-date with the latest scientific advances in the optimal use of *in vitro* assays and network with delegates from industry, academia and regulatory agencies.

The workshops are uniquely designed with a focus on the concepts and applications of IVIVE, but participants also have the opportunity to use the Simcyp ADME Simulator as a platform for automation. More advanced Simcyp Simulator users will be able to discuss specific aspects of Simcyp algorithms with our expert tutors.

Check the website for dates. Discounts are available for early registration and package bookings. To register your interest in these events please contact Kelly Jinkinson k.jinkinson@simcyp.com

Past, present and future workshops held internationally, locations include:

These workshops cover basic aspects of clinical trial simulations using physiologically based pharmacokinetics. They provide details of *in vitro – in vivo* extrapolation (IVIVE) techniques in the prediction of absorption, distribution, clearance and drug-drug interactions using a population based approach to identify the key covariates of PK in different ethnic groups, paediatric patients and various diseases.

All course material is set within a context relevant to drug discovery and development. All courses involve computer-based hands-on problem solving sessions.

Due to previous worldwide success and high demand for these interactive workshops, we recommend early booking.
