*Simcyp's world renowned workshop programme:*

**INTENSIVE INTERACTIVE WORKSHOPS**

# Model-based drug development: Incorporating population variability into mechanistic prediction of PK and modelling PK-PD

Simcyp workshops are an ideal way to enhance the continuous education of scientists working in clinical pharmacology and drug development. This event provides an excellent opportunity to develop skills, stay up-to-date with the latest scientific advances and network with delegates from industry, academia and regulatory agencies.

The model-based approach to various aspects of drug development is rapidly being adopted by many of the leading pharmaceutical companies. The Simcyp workshops focus on the optimal use of compound-specific *in vitro* and *in vivo* data together with system specific information related to humans to simulate and understand drug behaviour in various target populations. This integrated approach informs decisions related to Investigational New Drug (IND) and New Drug Applications (NDA) and assists with the conduct and optimal design of clinical studies. The ultimate aim is to improve the quality of submissions for regulatory approval.

*"It is good to learn about a package that is capable of taking into account so many influencing factors when considering clinical trials."*
