Drug Metabolism and Disposition DMD/2013/053611

Supplemental Figure 2. Laurdan emission spectra as a function of temperature in “natural membrane” vesicles. Laurdan emission scans (400 nm- 620 nm) were monitored at 350 nm excitation as a function of temperature. The effect of temperature increase on the Laurdan emission spectra is illustrated for the V-PC (A), V-MixPL (B) and V-DRM (C) systems. Emission scans are representative of 4 independent experiments.
