## Supplementary Figure S1

Time course of uptake of CPI (1  $\mu$ M) (A), [ $^3$ H]E17 $\beta$ G (1  $\mu$ M) (B) and [ $^3$ H]CCK-8 (0.1  $\mu$ M) (C) by HEK 293 cells stably expressing human OATP1B1 and OATP1B3. Uptake was performed by incubating cells with a probe prepared in HBSS buffer supplemented with 10 mM HEPES (pH 7.4) at 37  $^{\circ}$ C as described under *Materials and Methods* for different periods of time. Data are expressed as mean  $\pm$  SD (n = 3)
