

Supplementary Data

Characterization of Tissue Distribution, Catabolism and Elimination of an Anti-*Staphylococcus aureus* THIOMAB™ Antibody-Antibiotic Conjugate in Rats

Hao Cai*, Victor Yip*, M. Violet Lee, Sylvia Wong, Ola Saad, Shuguang Ma, Nina Ljumanovic, S. Cyrus Khojasteh, Amrita V. Kamath, and Ben-Quan Shen#

Journal title: Drug Metabolism and Disposition

Manuscript number: DMD-AR-2020-000092

Supplementary Fig. 1

Supplementary Figure 1

Supplementary Fig. 1. Position of ^{14}C isotope in (A) unconjugated dmDNA31 and (B) antibody-conjugated dmDNA31 (labeled site indicated with an arrow).

Supplementary Fig. 2

Supplementary Figure 2

Supplementary Fig. 2. Comparison of the tissue biodistribution of radiolabeled TAC in rats with or without co-administration of 50 mg/kg unlabeled TAC. Total radioactivity of (A) [^{125}I] and (B) [^{111}In] in multiple organs from rats at 7 days post IV administration. Data are represented as mean \pm SD. N=3 per data point.
