

Supplemental Materials to journal of “Drug Metabolism and Disposition”

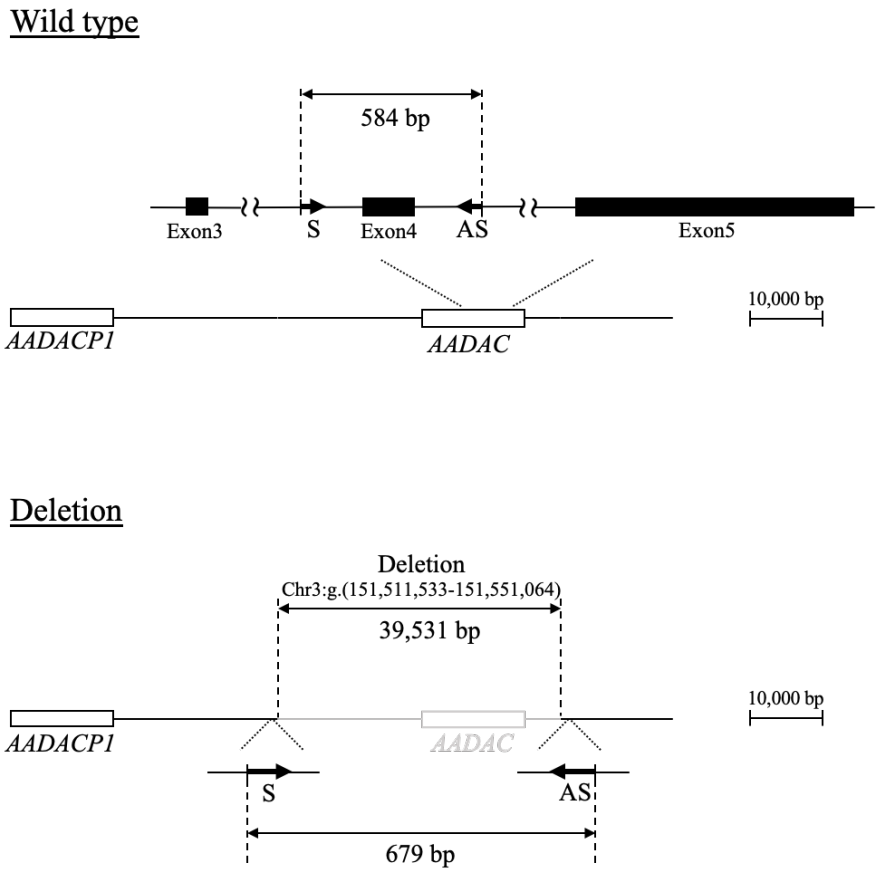

Manuscript number: DMD-AR-2020-000295

**Role of human AADAC on hydrolysis of eslicarbazepine acetate and effects of *AADAC* genetic polymorphisms on hydrolase activity**

Keiya Hirose, Tatsuki Fukami, Kiyomichi Tashiro, Yoshiyuki Sakai, Fumiya Kisui, Masataka Nakano, Miki Nakajima

Drug Metabolism and Toxicology, Faculty of Pharmaceutical Sciences, Kanazawa University, Kakuma-machi, Kanazawa 920-1192, Japan (K. H., T. F., K. T., Y. S., Ma.N., Mi. N.); WPI Nano Life Science Institute, Kakuma-machi, Kanazawa 920-1192, Japan (T. F., Ma. N., Mi. N.)

# Supplementary Fig. 1S

Supplementary Fig. 1S. Schematic diagram of the locations where the primer pairs for genotyping of *AADAC* wild type and gene deletion type were designed. PCR amplification was performed with the primer pairs indicated by horizontal arrows.
