Supplemental Figure. Semi-log plot of the average concentration-time curves, In(concentration) vs. linear(time), for four cytochrome P50 probe substrates pre- and post-consumption of a licorice extract from G. glabra by 14 female participants for 14 days. Error bars denote ±SE.
Caffeine (CYP1A2)

Alprazolam (CYP3A4/5)

Tolbutamide (CYP2C9)

Dextromethorphan (CYP2D6)
